

**Merry Christmas and Happy New Year**

As 2022 comes to a close, we can look back and pinpoint quite a few crucial steps.

## **Largest project in Europe**

We have landed the largest European off-site project in the prefabrication sector. For the customer's prefabrication manufacturing, we are creating a cutting-edge, adaptable production line. The high degree of automation in the machine lines emphasizes the efficient use of employees while removing risky activities and monotonous duties. They have made an investment that will allow for flexible production and very high output. We look forward to implementing it and continue taking part in their journey as a close business partner. Ensure to follow us on social media for further information during 2023!

## **Robotic blow-in insulation**

Randek has teamed up with Swiss Isofloc AG and launched a Robotic blow-in insulation cell. It allows prefabricating Off-site housebuilders to significantly increase the effectiveness and quality of their insulating process! It is available in multiple configurations and for different insulation materials. Four of them have already been sold by us.

## Robotic gluing cell

Recently, one of our customers required gluing in between the wall frame and the sheeting. We all agreed that gluing frames is a messy and back-breaking task, therefore we created the ZeroLabor robotic glue dispensing cell. It enables prefabricating off-site housebuilders to improve the effectiveness and caliber of their sheet fastening and gluing processes! It is available in multiple configurations and for different types of glue.

## ISO 9000 certification

We have taken the action to accredit us with ISO 9000 certification because we aim to improve. There are several benefits of having a management system like ISO 9000. When flaws are found and fixed, we have better control over both our own operations and the expectations and needs of our stakeholders. This gives us the capacity to continuously develop and boost profitability. This is just the beginning of our continuous ongoing work and improvements.

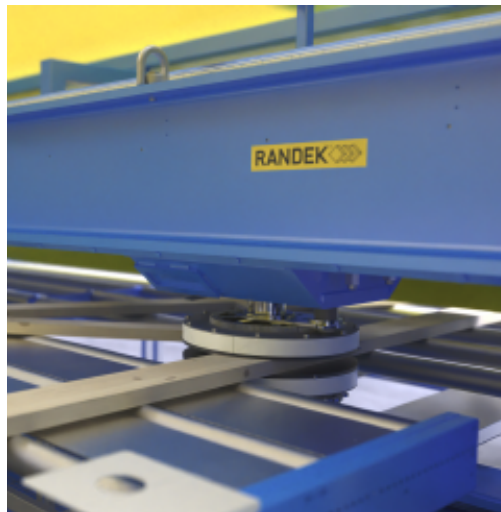

## **Randek & SCM at LIGNA**

Last year we started a cooperation with SCM and during this year we have further intensified our cooperation. We look forward to meeting you all at Ligna in May 2023!

## **AutoEye Truss System**

The AutoEye Truss System has now been available since 2008. Pretre AS Norway purchased the first Randek Auto Eye truss production machine line, and since then, 15 more have been sold to truss manufacturers all over the world. Its ability to tailor depending on your factory space and production output requirements is of great importance and provides quality control benefits for both fabricator and the builder.

**We wish you and your families a Merry Christmas and  
Happy New Year!**
